RODGER A PAYNE, AUG 24 2009

Believe it or not, two weeks before Labor Day in the U.S., classes started today at my university. I'm teaching an undergraduate course for nearly 50 students on "Global Ecopolitics" — a term used by Dennis Pirages, a professor at Maryland when I was in graduate school. The course will focus on the so-called "bottom billion" people living in poverty, as well as the politics of climate change.

I've previously blogged about my book choices, so this post is devoted to the other readings assigned for the class. The list below is in alphabetical order, rather than in the order the class will read them. Still, there's some useful reading here for people interested in the politics of climate change (or broader ecopolitical issues).
